

Note: The socket takes 3 client connections. All 3 clients must be put in order. The flow goes from Accept 3 client connections followed by input provided by client and finally read 1 admin command.

Please follow the instructions for testing purposes:

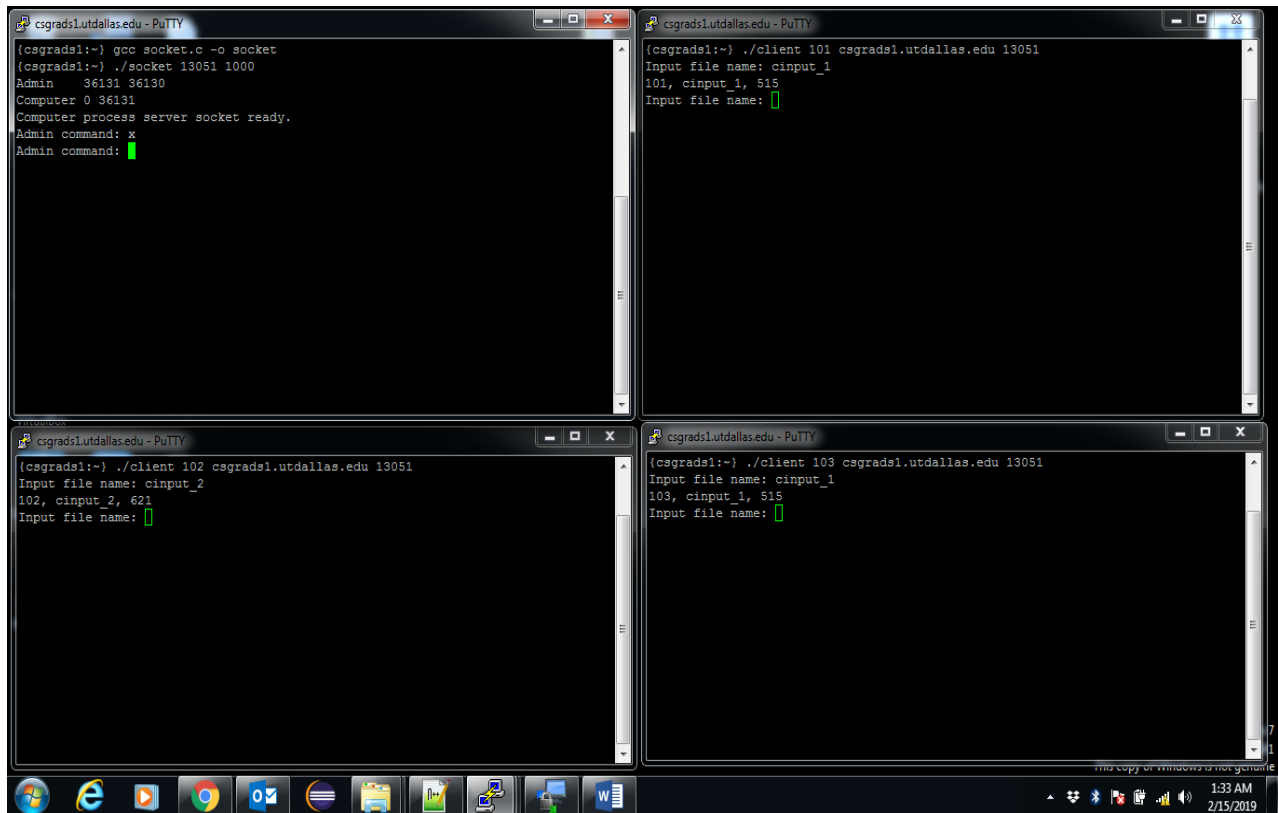

- a. We have Socket and 3 clients.

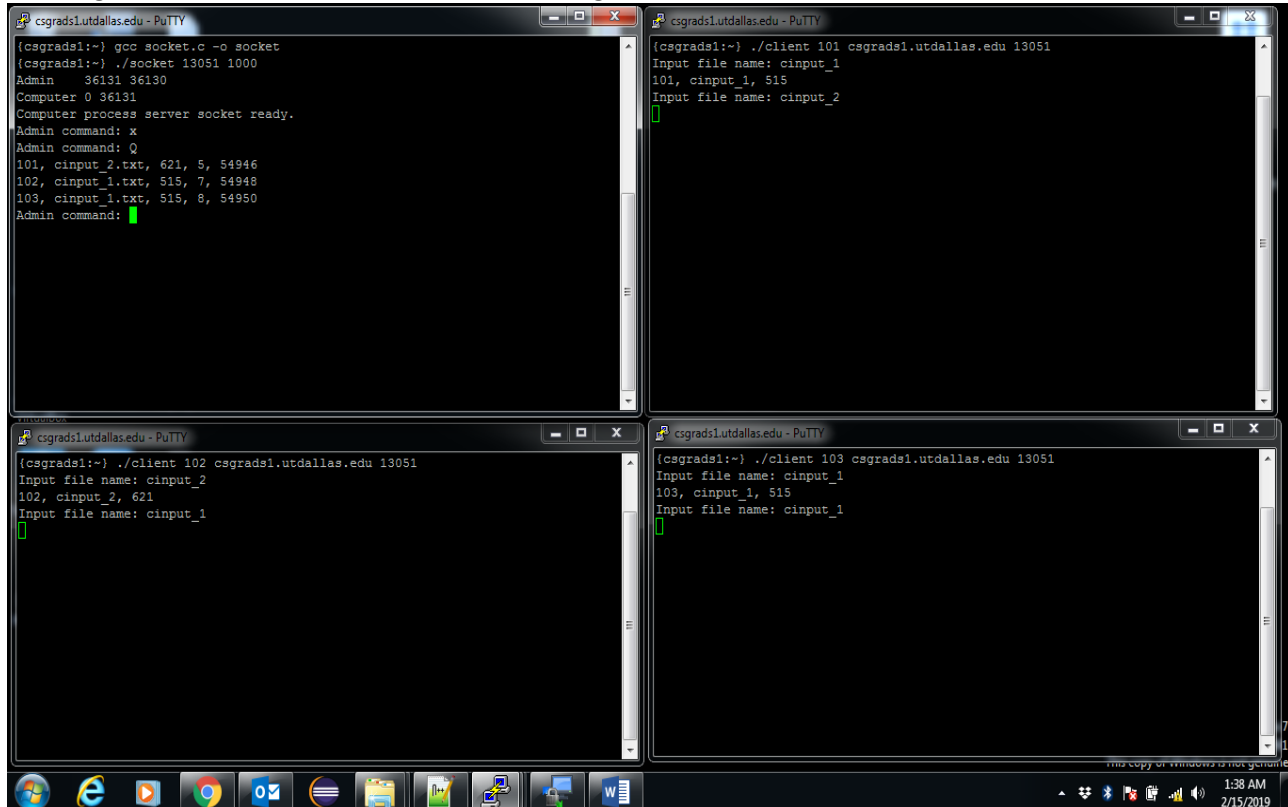

- b. Start the socket and 3 clients join.

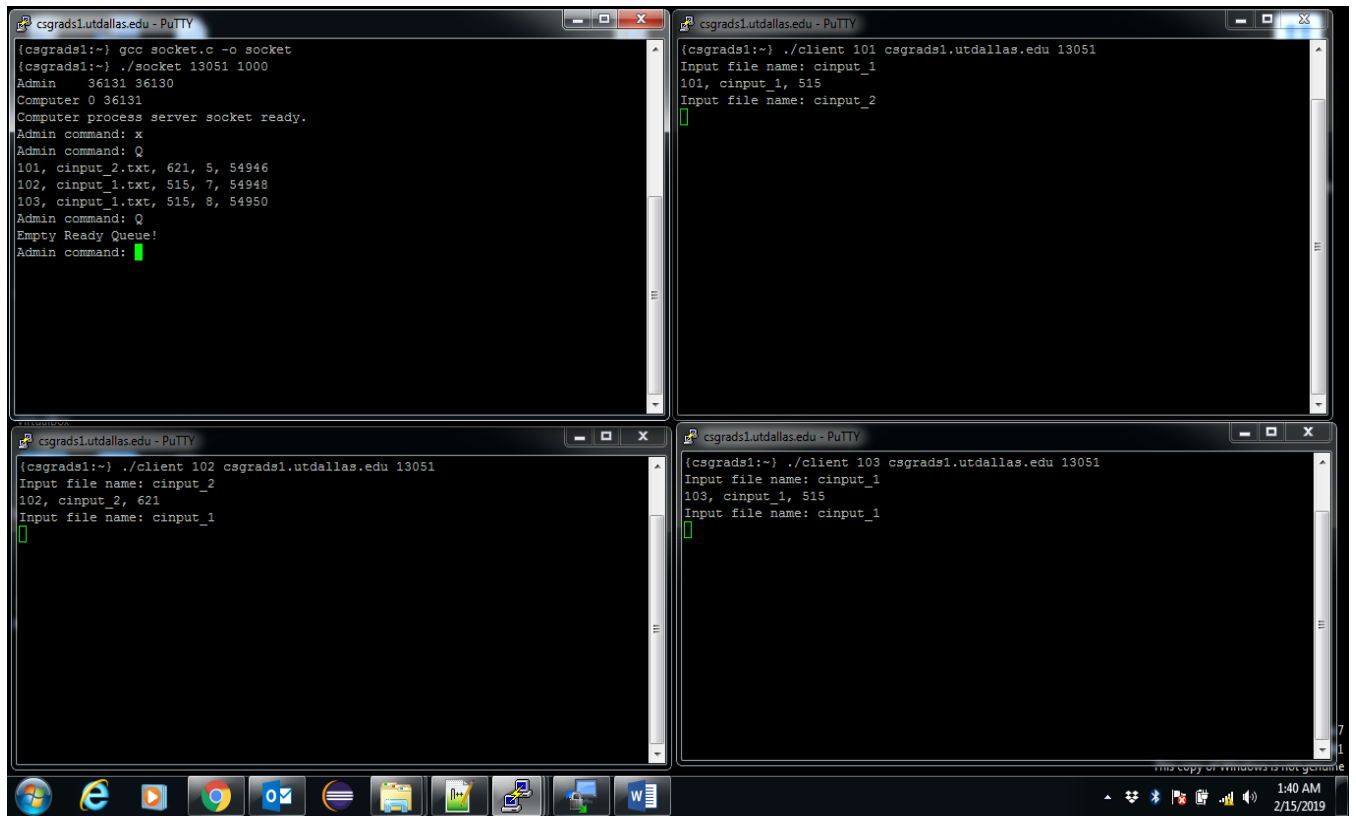

- c. Enter the file name from each client and then give the admin command as 'x'.

- d. Enter again all the filename from each client and give the admin command as 'Q'.

- e. Enter the admin command as Q without giving filenames.

f. Enter the admin command 'T'
